Summary

Sterling OMS Developer with hands-on experience designing, developing, and deploying customizations on IBM Sterling Order Management (v9.5), with a proven track record of delivering tailored, client-specific solutions. Expertise in OMS modules including Participant Modelling, Service Definition Framework, Agents, Transactions, User Exits, Queues, and Database Extensions. Proficient in Angular front-end development within the IBM Sterling BUC framework, and experienced in Java back-end customizations, XSLT transformations, and Agile delivery practices.

Education

PSNA College of Engineering and Technology

B.Tech in Information Technology – 81%

2020 – 2024

Dindigul, India

Professional Experience

Acuver Consulting

Associate Consultant

Jun 2025 – Present

Bangalore, India

Client: Titan Company Limited | Tech Stack: IBM Sterling 9.5 (OMS) OnPrem & OMoC, IBM SST, Java, XML, XSLT, Angular, Docker, JIRA, Angular, Typescript

- Delivered multiple Sterling OMS customizations covering back-end Java logic and Angular-based UI components, aligned to client-specific retail business requirements.
- Collaborated with cross-functional teams to validate and troubleshoot issues across the end-to-end Order Fulfillment cycle.
- Worked within an Agile delivery model, managing tasks and defects via JIRA and source control through GitLab.

Key Contributions

- **Refund Status API** – Designed and developed a custom Sterling OMS API providing real-time visibility into refund progress for customer-initiated returns, reducing dependency on manual status checks.
- **NextGenCC UI Customization** – Extended the IBM Sterling Next Generation Call Center UI with post-order operation capabilities, improving backend efficiency and customer support workflows.
- **DeltaSync Enhancement** – Refined item-level sync logic by updating item classification rules, ensuring accurate inventory publishing and downstream fulfillment decisions.
- **Shipment Integration Enhancement** – Updated shipment processing logic to dynamically populate carrier tracking links based on configurable shipment types, improving downstream visibility.
- **Notification Framework Refactoring** – Refactored XSLT transformation and mapping configurations to enable brand-specific SMS and Email notifications across shipment lifecycle events.
- **Cancellation Data Consistency Fix** – Identified and resolved a critical data consistency issue in the order cancellation flow, improving traceability across integrated downstream systems.

Acuver Consulting

Intern – Sterling OMS

Oct 2024 – Jun 2025

Bangalore, India

Client: Titan Company Limited | Tech Stack: IBM Sterling 9.5 (OMS), Java, XML, XSLT, Angular, JIRA, GitLab

- Onboarded onto IBM Sterling OMS platform and gained hands-on experience in OMS customization, service definitions, and order lifecycle management.
- Assisted in analysis, development, and testing of Sterling OMS customizations under senior developer guidance.
- Developed foundational proficiency in Java-based OMS back-end logic, XML/XSLT transformations, and Angular-based BUC UI components.
